#17FERY

雅特力MCU & RT-thread

2020/04/22

RT-Thread应用创新设计大赛

报名即可申请本开发板还有万元大奖等你来

关注RT-Thread公众号 及时获悉干货资料活动通知

主要内容

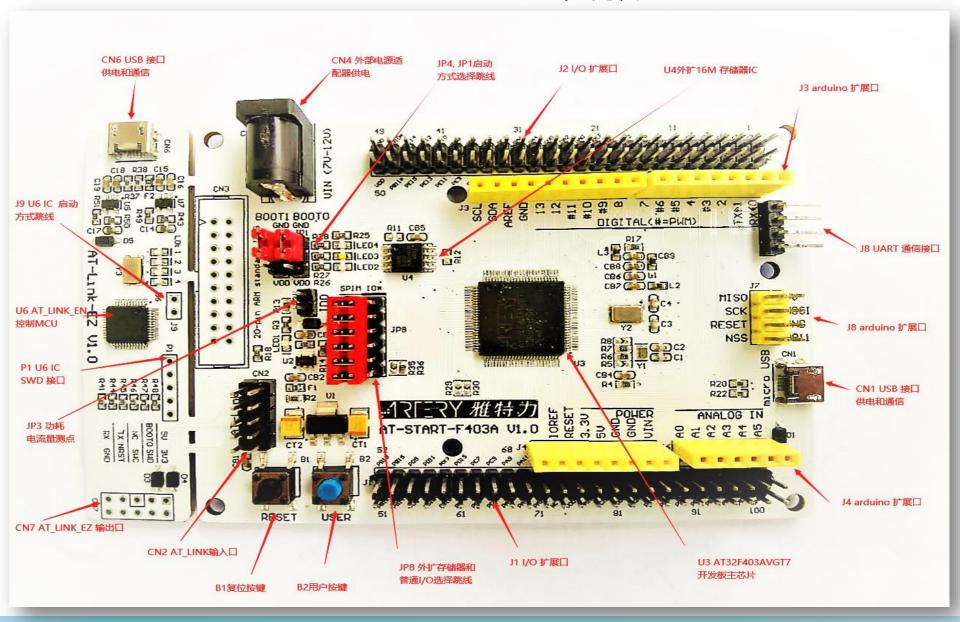

- 资料下载
- AT32F403A资料
- Rt-Thread资料
- ENV工具
- menuconfig
- scons
- RT-Thread
- 改MCU芯片型号
- 添加应用文件
- 演示运行效果

AT32F403A资料下载

http://www.arterytek.com/

AT-START-F403A V1.0 开发板

开启第一个串口打印程序

RT-Thread的资源下载——ENV工具

www.rt-thread.org/page/download.html

下载后的资料是env_released_1.2.0,解压后是文件夹env

RT-Thread的资源下载——rt-thread源码Src

https://github.com/rt-thread

RT-Thread原码以及相应的项目工程

Pinned repositories

RT-Thread is an open source IoT operating system from China.

● C ★ 4.1k ¥ 2.6k

☐ rtthread-manual-doc

RT-Thread Programming Manual in English

★ 229 ¥ 181

packages

packages index repository for rtthread

Python * 98 * 118

☐ rtthread-specification

The specification for RT-Thread porting, device driver implementation.

● C ★ 43 ¥ 29

■ env

Python Scripts for RT-Thread/ENV

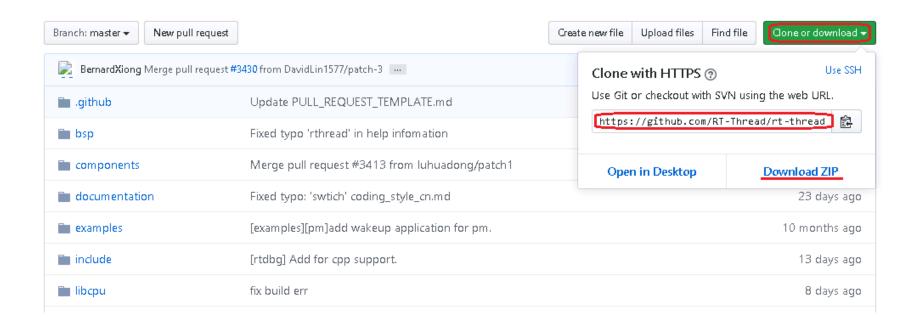

Python ★ 22 ¥ 22

☐ IoT_Board

RT-Thread for IoT Board (STM32L4 + Wi-Fi, sensor, Icd, audio etc)

● C ★ 168 ♥ 133

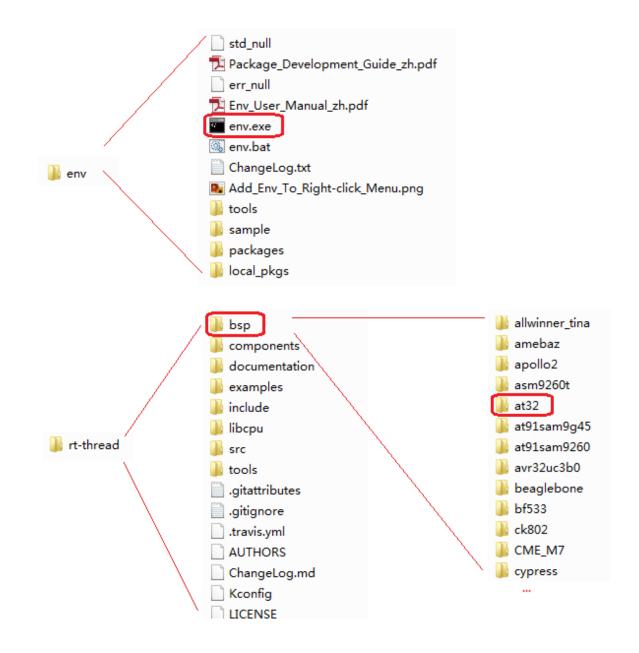

Download Src

解压后是rt-thread

目录结构

资料里面包含两个文件夹: env_released_1.1.3 rt-thread 其目录结构如右侧:

ENV工具

- RT-Thread的开发辅助工具
- scons
- 生成工程
- menuconfig
- 图形化配置界面
- 系统裁剪和配置

ENV控制台——生成工程项目

- env\env.exe
- cd命令切换到BSP board根目录
- 例:xxx\rt-thread\bsp\at32\at32f403a-start

ENV控制台——生成工程项目及演示

scons

• scons是RT-Thread使用的编译构建工具

1. scons 或 scons -j4

2. scons --target=mdk5

3. scons --target=mdk4

4. scons --target=iar

gcc编译

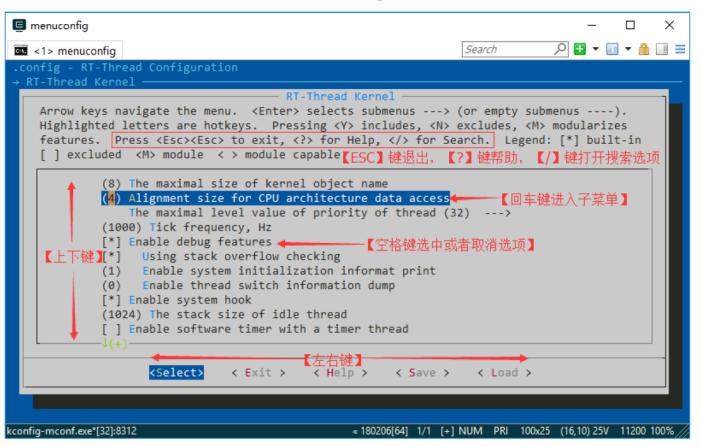

keil_v5工程

keil v4工程

iar工程

ENV控制台——驱动加载及实际演示 menuconfig

• env控制台输入menuconfig并运行

RT-Thread

- 同系列修改芯片型号
- 例:at32f403a-start, (at32f403avgt7->at32f403arct7)
- board/Kconfig

```
menu "Hardware Drivers Config"

config SOC_AT32F403AVGT7 SOC_AT32F403ARCT7

bool

select SOC_SERIES_AT32F403A

select RT_USING_COMPONENTS_INIT

select RT_USING_USER_MAIN

default y
```

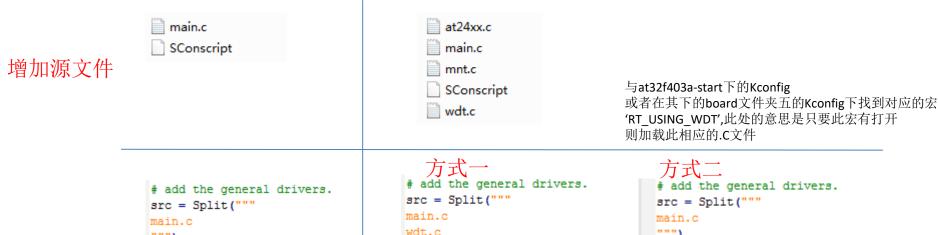

board/SConscript

```
if rtconfig.CROSS_TOOL == 'gcc':
    src += [startup_path_prefix + '/AT32_Std_Driver/CMSIS/AT32/AT32F4xx/src/gcc/startup_at32f403avgt7.s]
elif rtconfig.CROSS_TOOL == 'keil':
    src += [startup_path_prefix + '/AT32_Std_Driver/CMSIS/AT32/AT32F4xx/src/mdk/startup_at32f403avgt7.s]
elif rtconfig.CROSS_TOOL == 'iar':
    src += [startup_path_prefix + '/AT32_Std_Driver/CMSIS/AT32/AT32F4xx/src/iar/startup_at32f403avgt7.s]
CPPDEFINES = [AT32F403AVGT7] AT32F403ARCT7
startup_at32f403arct7.s
```

• Keil/IAR工程生成后在工程配置中重新选择device和算法文件

RT-Thread

- 添加源文件
- 例:bsp\at32\at32f403a-start\applications新增源码

mnt.c

修改SConscript

```
at24xx.c
                                if GetDepend(['RT_USING_WDT']):
                                     src += ['wdt.c']
                                if GetDepend(['BSP_USING_SDIO']):
此方式直接加载相应.C文件
                                     src += ['mnt.c']
                                if GetDepend(['BSP USING I2C1']):
                                     src += ['at24xx.c']
```

Thank you!
